## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-32 are allowed.
2. Claims 1 and 17 are allowed because the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of polarimetry by allowing a light with a known polarization direction 'X' to be incident upon a sample detecting a polarization direction of a light transmitted through said sample and measuring an angle of rotation of a polarization direction in said sample on the basis of the difference between said polarization directions of said incident light and said transmitted light, said method further comprising the steps of, performing a phase sensitive detection on an output signal by using a modulation signal as a reference signal to obtain a demodulation signal, and, calculating an angle of rotation from three or more polarization signals and three or more demodulation signals, in combination with the rest of the limitations of the respective claims.
3. Claims 2-8, and 18-24 are allowed because their limitations are dependent on limitations of independent claims 1 and 17 respectively, or an intermediate claim.
4. Claim 9 and 25 are allowed because the prior art of record, taken alone or in combination, fails to disclose or render obvious method of polarimetry by applying a magnetic field to a sample containing a spontaneously optical active substance and a magneto-optical active substance, allowing a light with a known polarization direction 'X' to be incident upon said sample changing and modulating a polarization direction of a light transmitted through said sample and calculating an angle of rotation attributed to said sample on the basis of a magnitude of said magnetic field when an amount of change in an angle of rotation attributed to said

spontaneously optical active substance and an amount of change in an angle of rotation attributed to said magnetic field satisfy a prescribed relation said method comprising the steps of, performing a phase sensitive detection on an output signal by using a modulation signal as a reference signal to obtain a demodulation signal, and, calculating an angle of rotation from three or more polarization signals and three or more demodulation signals, in combination with the rest of the limitations of the respective claims.

5. Claims 10-16, and 26-32 are allowed because their limitations are dependent on limitations of independent claims 9 and 25 respectively or an intermediate claim.
6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
